# “Do You Know Security?”

*Find the pages with four types of gun safes and four types of security safes. We have put this page together to demonstrate the different types of security. Most people just don't understand the difference in security and fire rating on safes. Mainly because they are not exposed to this information or if they have been to a Big Box retailer they have seen what we would call a plastic “fire box” with the word “burglary safe” written on the side and handle on the top. So we want to educate everyone on what is available that is real security and real fire protection. Education is essential to making good decisions.*

## Step 1

*So let's take a look at the different types of security?” Let's look at either the gun safes or the security safes below them and start from the left side and work to the right.*

## Step 2

*There are four main types of security safes available. In the gun safes category please find the TL-15 Gun Vault, Extra Thick Steel RSC, 10 Gauge RSC, and the 12 Gauge Hunter Series. In the security safes below please find the TL-15, Fire and Burglary, B-Rated Safe, and office safe.*

## Step 3

*Starting on the left side the TL-15 models will be the highest security rating in this example. Also, it's the most expensive of the safes in this example. “TL-15” stands for “TooL test time of 15 minutes”. This is a bit of a misleading name though because the 15 minutes is only the time that a tool is actually working on the safe and that the test can actually run several hours by UL. This rating is an insurable rating like a bank vault. Some insurance companies will only write insurance policies on contents in a TL-15 rated safe or higher. Also we install a hard plate cage on the interior of each wall, top, and bottom. Next, is the high compression concrete with an aluminum mixture for fire prevention and acts as a theft deterrent. (You can't use a blow torch to get through it and the aluminum mixture gunk's up grinding tools thus slowing down any would be thief.)*

## Step 4

*Next is the Fire and Burglary Series or the Extra Thick Steel RSC Gun Safe. Both are the next level down in security. But still have a 2 hour fire rating. Next is the B-rated safe or the 10 Gauge RSC. Both still have a good amount of security but offer less fireproofing. The B-Rated safe offers no fireproof. Still really good security though. Last are the Office safe and the 12 Gauge Hunter series gun safe. Both are the 4th notch down in security in this example. The office safe still holds 2 hour fireproof rating but the Hunter series is only 45 minutes. Based on local fire departments we know that from the time a fire sparks until the first drops of water start it takes roughly 20 minutes. Then it takes roughly another 20 minutes to fully extinguish the fire. So in our opinion anything less than 40 minutes of fire protection is really no protection at all and you will lose all your belongings if you actually have a fire.*

# DO YOU KNOW GUN SAFE SECURITY?

## DO YOU KNOW SECURITY?

### EMP-6333 GUN VAULT

- High Security
- UL Listed TL-15 Vault
- 2 Hour Fire Rated
- Rated for insurance rider policies
- High Security Vault Hinge

### REPUBLIC GUN SAFE

- UL Listed RSC Rated (Residential Security Container)
- 120 Minute Fire Rated
- High Security Vault Hinge
- 300% Thicker steel than most gun safes on the market today

### BLACK HAWK GUN SAFE

- Pending UL RSC Rating\*
- 10 Gauge (30% thicker steel than 12 Ga)
- 90 Minute Fireproof
- High Security Vault Hinge

### HUNTER GUN SAFE

- 12 gauge steel
- 45 Minute Fireproof
- Thinnest steel thickness for an RSC rated safe
- Standard Safe Hinge

### PM-1014

- High Security
- UL Listed TL-15 Vault
- 2 Hour Fire Rated
- Rated for insurance rider policies

### FB-450E-1

- Fire and Burglary Rated
- Strong Burglary
- 2 Hour Fire Protection

### B-1414E

- B-Rated Security
- No Fire Protection

### HS-750C

- Light Security
- 2 Hour Fire Rated

# WHAT A DIFFERENCE A HINGE MAKES!

Hollon Safe uses our own design solid steel hinge. These cost roughly 500% more than an industry standard hinge used by our competition. Seems crazy right? We don't think so because we want our customers to have decades of trouble free use of their safe. Our vault hinges on our gun safes are "NO SAG HINGES" and this takes much more steel to produce.

Lesser quality hinges are much smaller and often use "hinge cap" to make the smaller hinge look larger and more secure. How do you know if the gun safe you are looking at uses a hinge cap? Easy, it will be adjustable and no sign of being welded onto the front of the safe. It will look to perfect due to the use of epoxy to hold it into place. The adjustable feature is also needed because it's only a matter of time before it sags. Then the door will begin to stick and it will be hard to open and close. You may even need to lift up on the handle to get it to open. These are better than internal hinges which won't let the door open completely.

Some competitors use internal hinges. These are also something to be aware of. I suggest you open the door and place your hand on the hinge and follow it around to the inside. You will notice there is no fireproofing where the hinges

are attached. So if a chain is only as strong as its weakest link...here is the weakness. Those companies will often say stuff like "that is why it is only 75 minute fire rated and not 90 minutes." Which sounds good but it just doesn't work that way in a fire.

These hinges work but it's important you know what you are getting for the money. Hollon hinges are some of the best in the world and we are proud to offer these on our top safe models so you have trouble free use of your safe for decades.

# DO YOU KNOW FIREPROOFING?

The fire department tells us that it is on average 20 minutes from the time the fire sparks until they are ready to spray water on the house. This is not because the fire department is slow. But instead it is due you and me discovering we have a fire and then alerting the fire department. It's even slower if we are not home. Then we must depend on the neighbor or someone passing by and seeing smoke and fire.

Once the fire department has arrived it takes on average 20 minutes to extinguish the fire. So a solid 40 minutes can go by and that is past the time of safes purchased in a big box retail store. This is also why Hollon Safe doesn't even offer a fire rating less than 45 minutes.

There are several types of material that are used for fireproofing in safes. High compression rated Concrete composite is

used on high security burglary safes. But beware the word “composite” is often used on all types safes these days. This material adds fireproofing and security to the safe at the same time.

Other materials are also used. Such as a light compression concrete or “plaster of Paris”, different types of fire resistant foams, and for most gun safes fireboard is used. Regardless of which material is used always go for the most length of time in fire rating that you can afford.

None of us want a fire and none of are expecting our house to burn down. But if it does, it is better to be over prepared by an hour than 1 minute too short.

Did you know that a closet burns at a higher temperature (2000 degrees) then the house (1000)? This is due to the clothes in the closet.

- Two-hour KSG 4500 rated for 1750° fire safe.
- Extra thick body and door construction for added strength and appearance.
- Choice of electronic keypad or dial with key.
- 30 foot impact rated.
- 2-Active locking bolts PLUS fixed hinge side bolts.
- One removable shelf. (HS-500 model only).
- One anchoring hole. (Bottom)
- Bolting hardware included.

**Maximum protection from fire and water.**

Hollon Home Safes offer a full 100% more fire protection than the average home safe on the market today. Thicker Walls... thicker doors... and a grooved door seal promise a no-holds-barred defense against fire and water. Tested at a blazing 2-hour KSG 1750° F external temperature, this safe is still able to maintain an internal temp of only 350° F. To top it off, it's also 30-foot impact rated. This is one tough safe to crack.

- Anchor bolt for bolting safes to the floor on all models except HS-1750E.

### As Hard to kill as the Terminator

Hollon Office Safes are ultimate protection machines... manufactured with state-of-the-art technology and craftsmanship to provide the best protection of your documents and valuables against the threat of fire and burglary.

Just look at these features:

- Rated for 2 full hours at 1750° F outside, these safes refused to heat up past 350° F on the inside.
- Survived the KSG 30-foot impact test that simulates falling from a collapsing second story onto concrete.
- Bolt-down hole and hardware are included to add burglary resistance to the already heavy duty bolt work.

These elite safes are practically unstoppable.

- 1 Inch Bolts.
- 3-way locking chrome bolt work.
- Interior adjustable shelves in all models.
- Interior drawer.
- Water resistant.
- Door detente device automatically locks safe.
- Electronic keypad upgrade on all models.
- Recessed curvature provides virtually airtight construction preventing smoke damage.
- Anchor bolt for bolting safes to the floor on all models except HS-1750E.

**As Hard to kill as the Terminator**

Hollon Office Safes are ultimate protection machines... manufactured with state-of-the-art technology and craftsmanship to provide the best protection of your documents and valuables against the threat of fire and burglary.

Just look at these features:

- Rated for 2 full hours at 1750° F outside, these safes refused to heat up past 350° F on the inside.
- Survived the KSG 30-foot impact test that simulates falling from a collapsing second story onto concrete.
- Bolt-down hole and hardware are included to add burglary resistance to the already heavy duty bolt work.

These elite safes are practically unstoppable.

- (2-5) moving front bolt.
- 1 vertical locking bar.
- 1 top moving bolt.
- 1 bottom moving bolt.
- Adjustable shelves.
- Now with S&G dial or S&G Electronic lock.
- 1 Anchor bolt hole.
- Bolt down hardware.
- 2 hour fireproof.
- Tri-spoke handle.
- Glass re-locker (except FB-450).
- Heavy duty vault hinge.

**Extreme protection from extreme attacks**

Resistant to extreme fire and burglary attacks, these hardcore safes have passed a grueling test - 2 hours of fire at an external temperature of 1700°F, and a 350°F internal temp. Engineered with strong burglary resistance, heavy duty hinge and a unique Hollon feature - a 1-inch-thick hinge side locking bar that extends from the top to the bottom of the door. These models are ranked between our Office Safe series and our Commercial TL-15 series. Comes with your choice of a standard UL listed Group II Dial lock or Electronic keypad.

- Glass re-locker.
- Hard plate.
- Bolt down hole.
- Standard Color Battleship Grey.

### This is the TL-15 rated safe that thinks it's a TL-30.

Not only does it have similar features, it has far exceeded every TL-15 test we've put it through. And that's some testing.

This TL-15 with stands the most sophisticated burglar attacks. Our team of experts has punished this baby with everything short of dynamite. They've gone at it with sledgehammers, pickaxes, crowbars and pry bars, power saws, chisels, drills and rotating disc cutters ... with no luck.

As if that's not enough, this offers added protection against high-intensity fires. That's right ... this TL-15 has passed our Two Hour, 350° F Fire Test Certification. We're talking forest fire strength.

## MJ-1014

### Put a dead stop to theft or shrinkage - internal or external

Hollon Depository Safes allow companies to regain control of their cash... and are the absolute best choice for a heavy duty commercial environment.

Constructed with solid steel plates welded with continuous welds for all parts of the safe. B-Rated and designed for use with armored car services, restaurants, chain stores, convenience stores and government applications.

Comes complete with the S&G UL Group II lock... designed for high commercial series usage - and lasting up to 300% longer than standard UL listed Group II locks.

- B-Rated Heavy Duty Depository Safe.
- 1/2" Steel door.
- Internal re-locking devise provides secondary line of defense.
- 4 pre-drilled anchor holes.
- Anti-Fish baffle prevents theft through deposit door.
- Locks and re-locker are protected.
- Drill/Ballistic resistant hardplate.
- Dual re-lockers.

Weight: **135 lbs**

1/2" Thick plate on door

Drill resistant

With American and Global Part

- B-Rated Floor Safe for foundations.
- 1/2" thick solid steel door.
- Spring loaded re-locking device.
- Full length dead bar.
- Powder coated for more durable protection.
- U.L. listed Group II lock, with re-locker to protect against burglary attempts.
- 5 chrome plated solid steel locking bolts.
- Air-spring bar enable the door can be opened easily.
- Drill resistant hardplate to protect lock.

### You'll need a jackhammer to pry these loose.

Floor Safes offer the added advantage of concealment. Once installed in concrete and covered with a rug or carpet, they are near impossible to find. If the safe is found, it will literally take a jack hammer to wrest it out of the foundation. And the door is reinforced with drill-resistant hard plate made of hardened steel. You can't buy a drill or drill bit at your local hardware store that will even scratch the surface.

That's why these bad boys are our favorite high-security safes for gold coins, jewelry, paperwork, and a variety of other valuables. B-Rated and strong enough to use in a commercial environment but still affordable enough to install at home. We also install one of our UL listed Group II high usage Hollon dials at no additional charge - to give you decades of problem-free usage.

# DIAL LOCKS

The new standard in safe locks!

## SARGENT & GREENLEAF GROUP 2M MECHANICAL SAFE LOCKS

- Three brass and aluminum combination wheels provide 1,000,000 theoretical combinations.
- Designed and constructed to perform in the most demanding commercial applications.
- Internal relock trigger secures the lock in the event of a burglar's punch attack.
- Four-way drive cam allows mounting right-hand, left-hand, vertical-up, or vertical-down.

## SARGENT & GREENLEAF DIALS & RINGS

Front Reading, Large    Spy-Proof®, Large    Spy-Proof®, Large

- All dial and rings pictured above and listed in the table directly below can be used with any Group 2 or Group 2M-type lock.
- All dials incorporate spindles splined to 41 on the dial. This results in a forbidden zone of 90 to 10 in Group 2 and Group 2M combination locks.

## SPARTAN PIVOTBOLT

- Underwriters Laboratories Listed Type 1, VdS Class 2, EN1300 B, A2P B/E, DNV, and RoHS (Reduction of Hazardous Substances) compliant.
- The Spartan™ PivotBolt™ lock features a motor driven locking mechanism for an extra measure of security and longer battery life.
- Lock bolt retraction and extension is controlled by the movement of the safe's boltwork.
- The Spartan™ PivotBolt™ automatically locks to re-secure the safe whenever the container's boltwork moves to the fully closed position, discouraging the common (non-secure) practice of day-locking.
- The Spartan™ PivotBolt™ is connected to the keypad only by cable, which means the lock does not need to be placed directly behind the keypad. It can be located anywhere on the inside of the safe door.
- All PivotBolt models use the standard S&G Magic Module footprint, allowing for easy retrofit without the need for boltwork or mounting screw location changes. Plus, it's universally handed and reversible for RH, LH, VU, and VD mounting.
- Two modes of operation, STAR and BASIC, to let you choose the operating procedures that are most intuitive to you.
- Management reset code, one master code, and one user code that can be quickly enabled or disabled by the master code. The management reset code (MRC) lets you set a new master code of your own choosing if the old master code is lost or forgotten.
- The Spartan™ PivotBolt™ has a penalty time feature to prevent opening by entering sequential or random codes until a valid code is found.
- The keypad sounder (beeper) can be tuned on or off by entering a simple keypad command.
- All programming is quickly and easily done via the keypad (no separate programming equipment required).
- The lock bolt withstands 225 lbs. (1000 newtons) of bolt end pressure for a high level of security in boltwork blocking applications.
- Can be used with the S&G 2-battery keypad, standard 1-battery keypad (standard or lighted), or the non-rotating low profile keypad.

## 6120 SERIES

- Underwriters Laboratories Listed Type 1, and RoHS (Reduction of Hazardous Substances) compliant.
- A motor-driven lock bolt offers a high level of security by eliminating the threat of vibration and bouncing attacks.
- Management reset code, one master code, and eight user codes.
- Management reset code (MRC) restores the lock to its original factory code if the master code is lost.
- Time delay up to 9 minutes.
- The 6120 Series incorporates a penalty time feature to prevent opening by entering sequential or random codes until a valid code is found.
- The deadlocking square bolt model withstands 225 lbs. (1000 newtons) of bolt end pressure for a high level of security and durability in boltwork blocking applications.
- Non-deadlocking spring bolt model is designed for lightweight and inner compartment doors that require the lock to latch and secure the door.
- Can be used with the Biometric Keypad, 2-battery keypad, standard 1-battery keypad (lighted and non-lighted), and the low profile keypad.

## TITAN PIVOTBOLT

- Underwriters Laboratories Listed Type 1, VdS Class 2, CEN B, A2P B, DNV, and RoHS (Reduction of Hazardous Substances) compliant.
- The Titan PivotBolt™ lock features a new design, motor driven locking mechanism for an extra measure of security and longer battery life.
- Lock bolt retraction and extension is controlled by the movement of the safe's boltwork.
- The Titan PivotBolt™ automatically locks to re-secure the safe whenever the container's boltwork moves to the fully closed position, discouraging the common (non-secure) practice of day-locking.
- The Titan PivotBolt™ is connected to the keypad only by cable, which means the lock does not need to be placed directly behind the keypad. It can be located anywhere on the inside of the safe door.
- S&G Magic Module footprint for easy retrofit, and it's universally handed and reversible for RH, LH, VU, and VD mounting.
- Three modes of operation: Multi-User, Manager/Employee, Dual Control.
- Management reset code, one master code, one supervisor code, eight user codes, and one time delay override code\*. The management reset code (MRC) lets you set a new master code of your own choosing if the old master code is lost or forgotten.
- The Titan PivotBolt™ has a penalty time feature to prevent opening by entering sequential or random codes until a valid code is found.
- All programming is quickly and easily done via the keypad (no separate programming equipment required).
- The lock bolt model withstands 225 lbs. (1000 newtons) of bolt end pressure for a high level of security in boltwork blocking applications.
- Can be used with the S&G 2-battery keypad, standard 1-battery keypad (lighted and non-lighted), or the non-rotating low profile keypad.
